

Close telnet

——For all DVR / HCVR / NVR

1. Run `Upgrade.exe`

2. Input IP address, port, username & password of the device

A screenshot of the 'Upgrade Tool' window. It has a title bar with the text 'Upgrade Tool' and a maximize button. The window contains five input fields: 'IP/Domain Name', 'Port', 'HTTP Port', 'Device Username', and 'Device Password'. The 'Port' field contains the value '37777' and the 'HTTP Port' field contains '80'. The 'IP/Domain Name', 'Device Username', and 'Device Password' fields are empty. A red rectangle highlights the 'IP/Domain Name' field, and another red rectangle highlights the 'Device Username' and 'Device Password' fields. At the bottom right, there is an 'Upgrade' button, which is also circled in red.

3. Click `Upgrade` and wait, it will show `Upgrade successful`
